In mathematics, general topology is the branch of topology that deals with the basic set-theoretic definitions and constructions used in topology. It is the foundation of most other branches of topology, including differential topology, geometric topology, and algebraic topology. Another name for general topology is point-set topology.. The fundamental concepts in point-set topology are ...

where  $y$  is a function of  $x$ ,  $y'$  is the first derivative with respect to  $x$ , and  $y''$  is the  $n$ th derivative with respect to  $x$ .. Nonhomogeneous ordinary differential equations can be solved if the general solution to the homogenous version is known, in which case the undetermined coefficients method or variation of parameters can be used to find the particular solution.

INTRODUCTORY. Systematics is a profoundly historical discipline, and we forget this at our peril. Only with a phylogeny can we begin to understand diversification, regularities in patterns of evolution, or simply suggest individual evolutionary changes within a clade.

Software-defined networking (SDN) technology is an approach to network management that enables dynamic, programmatically efficient network configuration in order to improve network performance and monitoring making it more like cloud computing than traditional network management. SDN is meant to address the fact that the static architecture of traditional networks is decentralized and complex ...

The reactive transport experiments were performed in three columns, in which different pyrite inclusions were embedded in the porous media. The grain size of the pyrite was the same of the surrounding sandy matrix (125–250  $\mu\text{m}$ ), thus the column setups consisted of physically homogeneous but chemically heterogeneous porous media.

1. Introduction. Hydrogels are crosslinked network of hydrophilic polymers that can swell in water to capture many times their original mass. Physical and biochemical properties of hydrogels largely depend on their compositions, methods used for their polymerization, and their crosslinking density.

We report DNA- and RNA-like systems built from eight nucleotide "letters" (hence the name "hachimoji") that form four orthogonal pairs. These synthetic systems meet the structural requirements needed to support Darwinian evolution, including a polyelectrolyte backbone, predictable thermodynamic stability, and stereoregular building blocks that fit a Schrödinger aperiodic crystal.

Fans of the Traveller role playing game have to do a bit of work. Starships in Traveller are rated in terms of "displacement tons" or "dtons". This is a measure of volume, not mass. 1 dton is 14 cubic meters, which is approximately the volume taken up by one metric ton of liquid hydrogen (actually closer to 14.12 m<sup>3</sup>). Liquid hydrogen is starship fusion fuel.

I wasn't going to put this section in, but I have to. I wanted to keep the website as free from handwavium as possible. However, while Faster-Than-Light travel is about as handwavium as you can get, it is unfortunately the sine qua non of interstellar space opera. Space opera with no StarDrive is like chocolate cake without the chocolate.
