I wonder if so many women would "choose" hysterectomy if they knew how it would affect their figure and internal anatomy. I know I would have told my once respected gynecologist "no way" and left never to return if I'd known just a smidgen of what I now know. Here are some of the anatomical and skeletal changes that occur post hysterectomy.

A bone is a rigid organ that constitutes part of the vertebrate skeleton. Bones protect the various organs of the body, produce red and white blood cells, store minerals, provide structure and support for the body, and enable mobility. Bones come in a variety of shapes and sizes and have a complex internal and external structure.
