"super resolution" is an upscaling function on LG monitors. If your computer or whatever is outputting 1080p you should turn "super resolution" off. If "normal" looks blurry that means you're probably not outputting 1080p or your house is built on an ancient burial ground and the demons are trying to steal your soul.

Super-resolution microscopy, in light microscopy, is a term that gathers several techniques, which allow images to be taken with a higher resolution than the one imposed by the diffraction limit. Due to the diffraction of light, the resolution in conventional light microscopy is limited, as stated (for the special case of widefield illumination) by Ernst Abbe in 1873.
