1.4 Continuous-Flow Reactors. Continuous flow reactors are almost always operated at steady state. We will consider three types: the continuous-stirred tank reactor (CSTR), the plug flow reactor (PFR), and the packed-bed reactor (PBR). Detailed physical descriptions of these reactors can be found in both the Professional Reference Shelf (PRS) for Chapter 1 and in the Visual Encyclopedia of ...

The Damköhler numbers (Da) are dimensionless numbers used in chemical engineering to relate the chemical reaction timescale (reaction rate) to the transport phenomena rate occurring in a system. It is named after German chemist Gerhard Damköhler. The Karlovitz number (Ka) is related to the Damköhler number by $Da = 1/Ka$. In its most commonly used form, the Damköhler number relates the ...

We can derive the following solution for step responses of overdamped systems, Equation 3.41 . Note that, as in the case of first-order systems, we can divide by kDu to develop a dimensionless output. Also, the dimensionless time is t/t and we can plot curves for dimensionless output as a function of z . This is done in Figure 3-8, which includes the critically damped case, as discussed next.

Early three-dimensional network models are usually based on cubic lattice with a constant coordination number of six, Fig. 1(a) (Ioannidis and Chatzis, 1993b, Reeves and Celia, 1996). However, in actual porous media, the connectivity is distributed and can have coordination number greater than six (Dong and Blunt, 2009, Jivkov et al., 2013, Kwiecien et al., 1990).
