This page looks at the basic ideas underpinning the idea of a chemical equilibrium. It talks about reversible reactions and how they behave if the system is closed. This leads to the idea of a dynamic equilibrium, and what the common term "position of equilibrium" means. A reversible reaction is one ...

### AN INTRODUCTION TO CHEMICAL EQUILIBRIA - chemguide

The rate law or rate equation for a chemical reaction is an equation that links the reaction rate with the concentrations or pressures of the reactants and constant parameters (normally rate coefficients and partial reaction orders). For many reactions the rate is given by a power law such as  $\text{rate} = k[A]^m[B]^n$  where [A] and [B] express the concentration of the species A and B (usually in moles per liter ...
