In this article, we revisit the most fundamental statistics theorem, talking in layman terms. We investigate a special but interesting and useful case, which is not discussed in textbooks, data camps, or data science classes.

The shape of a Gaussian beam of a given wavelength λ is governed solely by one parameter, the beam waist w_0 . This is a measure of the beam size at the point of its focus ($z=0$ in the above equations) where the beam width $w(z)$ (as defined above) is the smallest (and likewise where the intensity on-axis ($r=0$) is the largest). From this parameter the other parameters describing the beam geometry ...

Brouwer's fixed-point theorem is a fixed-point theorem in topology, named after L. E. J. (Bertus) Brouwer. It states that for any continuous function mapping a compact convex set to itself there is a point such that $f(x) = x$. The simplest forms of Brouwer's theorem are for continuous functions from a closed interval in the real numbers to itself or from a closed disk to itself.

As the mass of energy is very small ($c^2 = \{299,750,000 \text{ meters/sec}\}^2$!), the phenomenon can only be detected in the presence of VERY strong gravitational fields. It has been verified thanks to the Sun's great mass: rays of light are curved when they approach it. This experiment was the first confirmation of Einstein's theory.

10. Analyzing the Meaning of Sentences. We have seen how useful it is to harness the power of a computer to process text on a large scale. However, now that we have the machinery of parsers and feature based grammars, can we do anything similarly useful by analyzing the meaning of sentences?

We present a decision theory which models and axiomatizes a decision-making procedure. This procedure involves two steps: in the first step, for each action, some specific event which can bring about a relatively high payoff with a relatively high probability or a relatively low payoff with a relatively high probability is selected as the positive or negative focus, respectively; in the second ...
