A bushing or rubber bushing is a type of vibration isolator. It provides an interface between two parts, damping the energy transmitted through the bushing. A common application is in vehicle suspension systems, where a bushing made of rubber (or, more often, synthetic rubber or polyurethane) separates the faces of two metal objects while allowing a certain amount of movement.

Real-time vibration monitoring visualizes changes to equipment's low-frequency vibration levels and identifies changes when they occur. The vibration monitoring system provides alerts when vibrations go outside of the normal range and streams condition-based data to central operations through a web-hosted platform via WiFi communication.

Auto-alignment system can be configured with motorized stages, XPS motion controller, optical detector, power meter and GBCS auto-alignment software. The automated alignment software is designed to align the fiber components by scanning in XYZ, recording the motion coordinates and the coupling power and then commanding the system to return to the optical peak position.
