Solution Of Treybal Mass Transfer

Liquid-liquid (or solvent) extraction is a countercurrent separation process for isolating the constituents of a liquid mixture. In its simplest form, this involves the extraction of a solute from a binary solution by bringing it into contact with a second immiscible solvent in which the solute is soluble.

Calculation Techniques. To solve a flash distillation problem, one simultaneously solves the operating and equilibrium equations. Flash calculations can be solved directly, but usually require an iterative solution.

Liquid Extraction Liquid extraction produces separation of the constituents of a liquid solution by contact with another insoluble liquid. If the components of the original solution distribute differently between the two liquids, separation will result.
