We call 0.069 g O<sub>2</sub> the actual yield. The percent yield is the ratio between the actual and theoretical yield, expressed as a percent. The theoretical yield is the maximum amount of product we can obtain, and the percent yield tells how much of this was actually obtained.

**The Stoichiometry of Product Formation and Percent Yield**

However, in a reaction to prepare a compound, you may get less than the theoretical yield, because of incomplete reactions or loss. The amount recovered divided by the theoretical yield gives a percent yield (% yield) or actual yield. The above reaction will produce a solid precipitate of and an aqueous solution of.
