R f values are calculated by looking at the distance each component travels on the chromatography paper compared to the distance traveled by the solvent front. This ratio will be different for each component due to its unique chemical properties. When measuring the distance the component traveled, you should measure from the origin (where the middle of the spot originally was) and then to the ...

Here are a couple more examples of stimulus shaping. Stimulus fading is the procedure where a feature of the materials (stimulus) is made more salient and then gradually faded over time to become a more generalized stimulus. In this procedure, fading involves the manipulation of any dimension of the stimulus (e.g., color, size, shape, position) not just the relevant one.

Mentorship is a relationship in which a more experienced or more knowledgeable person helps to guide a less experienced or less knowledgeable person. The mentor may be older or younger than the person being mentored, but he or she must have a certain area of expertise. It is a learning and development partnership between someone with vast experience and someone who wants to learn.

Mentorship - Wikipedia
