In the Al-Co-Cr-Cu-Fe-Ni alloy system, Al and Ni have the largest negative mixing enthalpy among all the element pairs [], which favors the formation of ordered $\gamma'(L1_2)$ phase. Cu has positive mixing enthalpy with all other elements except Al, and Cu and Ni have the smallest positive mixing enthalpy among all the element pairs.

The periodic table, also known as the periodic table of elements, is a tabular display of the chemical elements, which are arranged by atomic number, electron configuration, and recurring chemical properties. The structure of the table shows periodic trends. The seven rows of the table, called periods, generally have metals on the left and non-metals on the right.

History. Noble gas is translated from the German noun Edelgas, first used in 1898 by Hugo Erdmann to indicate their extremely low level of reactivity. The name makes an analogy to the term "noble metals", which also have low reactivity. The noble gases have also been referred to as inert gases, but this label is deprecated as many noble gas compounds are now known.
