Publisher Summary. This chapter discusses the principles of statics that are essential to structural and stress analysis. A force is a vector that may be represented graphically, where the force F is considered to be acting on an infinitesimally small particle at the point A and in a direction from left to right. The magnitude of F is represented, to a suitable scale, by the length of the line ...

Structural Integrity Analysis. Chapter 1 Stress Concentration

Almost everything has an internal structure and can be thought of as a "structure". The objective of this chapter is to figure out the forces being carried by these structures so that as an engineer, you can decide whether the structure can sustain these forces or not. Note: this includes "reaction" forces from the supports as well.
