An Azure cloud deployment goes offline for software updates, as well as changes to the underlying hypervisor, which is managed by Microsoft. By default, Azure VMs are subject to several brief -- less than 30 seconds -- outages throughout the year for Microsoft's updates. Application and business requirements could make this downtime unacceptable to an enterprise cloud user, but it is unavoidable.

Use Azure availability sets for patching to achieve the ...

use chr(39) to find the single quote. Create two ports which will hold the characters that are before single quotes and characters that are after single quotes
