SOIL PROFILE. The ground is modified and enriched by the plants growing on it. Making a section of soil (figure 4), you can observe different layers: a layer rich in organic matter, the humus (O); a layer rich in roots and living organisms (A); a layer less rich in life, but still used by roots (B) and an inert soil (C).

Science Experiments on Environmental Education and Biology

The genus Cullen in the Fabaceae was published in 1787 by German physician and botanist Friedrich Kasimir Medikus. (Hugh Clarke) Cullumia: there is a slight uncertainty about who this genus was named for. Almost certainly it was intended by the author, Robert Brown, to honor Thomas Gery Cullum (1741-1831), a medical practitioner and surgeon, member of both the Royal and Linnean Societies, and ...

Conservation - Calculating background extinction rates: To discern the effect of modern human activity on the loss of species requires determining how fast species disappeared in the absence of that activity. Studies of marine fossils show that species last about 1–10 million years. Assume that all these extinctions happened independently and gradually—i.e., the “normal” way—rather ...

Conservation - Calculating background extinction rates ...

Non-human animals in space originally served to test the survivability of spaceflight, before human spaceflights were attempted. Later, other non-human animals were flown to investigate various biological processes and the effects microgravity and space flight might have on them.

Bioastronautics is an area of bioengineering research which spans the study and support of life in space.
