What's New at MMM Free Response Question Database (4/20/19). For those teachers who frequent the AP Central website (<https://apcentral.collegeboard.org>), we have put together a database of free-response questions since the year 1998. It classifies the calculus topics of every question (AB and BC) so that teachers can find free-response problems that cover specific techniques.

PH471 - General Relativity and Cosmology

Zeno's paradoxes are a set of four paradoxes dealing with counterintuitive aspects of continuous space and time. 1. Dichotomy paradox: Before an object can travel a given distance d , it must travel a distance $d/2$. In order to travel $d/2$, it must travel $d/4$, etc. Since this sequence goes on forever, it therefore appears that the distance d cannot be traveled.

Zeno's Paradoxes -- from Wolfram MathWorld

Classical logic is a 19th and 20th century innovation. The name does not refer to classical antiquity, which used the term logic of Aristotle. In fact, classical logic was the reconciliation of Aristotle's logic, which dominated most of the last 2000 years, with the propositional Stoic logic. The two were sometimes seen as irreconcilable.

Classical logic - Wikipedia

Calculation of the Jacobian for the transformation from Cartesian to spherical coordinates. The Jacobian is a scalar value that represents the determinant of the Jacobian matrix. It is used to calculate the volume element in spherical coordinates. The Jacobian for the transformation from Cartesian to spherical coordinates is given by:

Separation of variables is a method of solving ordinary and partial differential equations. For an ordinary differential equation $(dy)/(dx)=g(x)f(y)$, (1) where $f(y)$ is nonzero in a neighborhood of the initial value, the solution is given implicitly by $\int (dy)/(f(y))=\int g(x)dx$. (2) If the integrals can be done in closed form and the resulting equation can be solved for y (which are two pretty ...

Separation of Variables -- from Wolfram MathWorld

Steven Strogatz is an applied mathematician who works in the areas of nonlinear dynamics and complex systems, often on topics inspired by the curiosities of everyday life. He loves finding math in places where you'd least expect it—and then using it to illuminate life's mysteries, big and small.
