Tools used in analog signal processing. A system's behavior can be mathematically modeled and is represented in the time domain as $h(t)$ and in the frequency domain as $H(s)$, where s is a complex number in the form of $s=a+ib$, or $s=a+jb$ in electrical engineering terms (electrical engineers use "j" instead of "i" because current is represented by the variable i).

Data transmission (also data communication or digital communications) is the transfer of data (a digital bitstream or a digitized analog signal) over a point-to-point or point-to-multipoint communication channel. Examples of such channels are copper wires, optical fibers, wireless communication channels, storage media and computer buses. The data are represented as an electromagnetic signal ...
