Contact mechanics is the study of the deformation of solids that touch each other at one or more points. A central distinction in contact mechanics is between stresses acting perpendicular to the contacting bodies' surfaces (known as the normal direction) and frictional stresses acting tangentially between the surfaces. This page focuses mainly on the normal direction, i.e. on frictionless ...

Fluid mechanics is the study of the flow of fluids, and is sometimes known as hydrodynamics. Properties normally ascribed to fluids include density  $\rho$ , compressibility  $\beta$  (sometimes specified in terms of the so-called second viscosity coefficient  $\lambda$ ), and dynamic viscosity  $\eta$ . In general, the motion of fluids is extremely complicated, including highly nonlinear phenomena like ...
