Genetically modified foods (GM foods), also known as genetically engineered foods (GE foods), or bioengineered foods are foods produced from organisms that have had changes introduced into their DNA using the methods of genetic engineering. Genetic engineering techniques allow for the introduction of new traits as well as greater control over traits when compared to previous methods, such as ...

Genetically modified food - Wikipedia

The key to the healing treatment is a bacterium with some useful properties. It forms spores, so can lie dormant for years. When exposed to water and some nutrients, the spores germinate; the bacteria can now metabolize, generating CO_2 which dissolves to form bicarbonate ions (HCO_3^-). There is calcium ion (Ca^{2+}) around, so calcium carbonate (CaCO_3) precipitates.

This November, Californians will vote on an initiative that would require any food containing ingredients derived from genetically modified crops to be labeled as such.. Backers of the “California Right To Know Genetically Engineered Food Act” are pitching it as a matter of providing information to consumers, who, they argue, “have a right to know what’s in the food we buy and eat and ...

The anti-GMO campaign’s dangerous war on science

Insulin is a drug that is used to control glucose in patients with diabetes mellitus. It is the only parenteral antidiabetic agent available for exogenous replacement of low levels of insulin.. Insulin is the hormone produced by the pancreatic beta cells of the islets of Langerhans. It is released into circulation when the levels of glucose around the cells arise.
