A bone is a rigid organ that constitutes part of the vertebrate skeleton. Bones protect the various organs of the body, produce red and white blood cells, store minerals, provide structure and support for the body, and enable mobility. Bones come in a variety of shapes and sizes and have a complex internal and external structure.

**Bone - Wikipedia**

A blood smear is created by placing a drop of blood near the end of a clean glass microscope slide. Another slide is held at an angle, backed into the drop, and then smoothly dragged forward to spread the blood film along the slide.

6.1.1 Ilium. Ilium is pronounced 'ill ee umm' and iliac is 'ill ee ack'. The major portion of the pelvis is composed of two bones, each called the ilium — one on either side of the backbone (or spinal column) and curving towards the front of the body. When you place your hand on either hip, your hand rests on the iliac crest, which is the upper border of the ilium on that side.

Artificial cranial deformation or modification, head flattening, or head binding is a form of body alteration in which the skull of a human being is deformed intentionally. It is done by distorting the normal growth of a child's skull by applying force. Flat shapes, elongated ones (produced by binding between two pieces of wood), rounded ones (binding in cloth), and conical ones are among ...
