Process Design is the "capstone" course in the chemical engineering curriculum. It used to be divided into Equipment Design and Plant Design. With the publication of Rudd and Watson's "Process Engineering Strategy" in 1968, it was recognized that it's principles can be taught and not "just has to be learned later" by a chemical engineer in his career.

In terms of [CDL*98], this could be considered the conceptual source models. The “logical source models”, then, correspond to the data models of individual chemical engineering tools. Note, however, that when re-using legacy tools, their data models will usually cover aspects of more than one conceptual source model.
