A Bingham plastic is a viscoplastic material that behaves as a rigid body at low stresses but flows as a viscous fluid at high stress. It is named after Eugene C. Bingham who proposed its mathematical form.. It is used as a common mathematical model of mud flow in drilling engineering, and in the handling of slurries.A common example is toothpaste, which will not be extruded until a certain ...

Shear rate is the rate at which a progressive shearing deformation is applied to some material.. Simple shear. The shear rate for a fluid flowing between two parallel plates, one moving at a constant speed and the other one stationary (Couette flow), is defined by  $\dot{\gamma} = \frac{v}{h}$ , where:

Minor Head Loss – Local Losses. In industry any pipe system contains different technological elements as bends, fittings, valves or heated channels. These additional components add to the overall head loss of the system. Such losses are generally termed minor losses, although they often account for a major portion of the head loss. For relatively short pipe systems, with a relatively large ...

Equation (1) expresses the pressure loss due to friction in the pipe as a head ( $h_L$ ) of the flowing fluid.. The terms and dimensions in Equation (1) are:  $h_L$  head of fluid, dimension is length  $f$  Moody friction factor (also called Darcy-Weisbach friction factor), dimensionless  $L$  length of straight pipe, dimension is length  $D$  inside diameter of pipe, dimension is length
