In mathematics, a system of linear equations (or linear system) is a collection of two or more linear equations involving the same set of variables. For example,  $+ - = - + = - - + - =$  is a system of three equations in the three variables  $x, y, z$ . A solution to a linear system is an assignment of values to the variables such that all the equations are simultaneously satisfied.

In mathematics and science, a nonlinear system is a system in which the change of the output is not proportional to the change of the input. Nonlinear problems are of interest to engineers, biologists, physicists, mathematicians, and many other scientists because most systems are inherently nonlinear in nature. Nonlinear dynamical systems, describing changes in variables over time, may appear ...
