Swap Solution to the Critical Section Problem. wait (or acquire ) signal (or release ) o the wait and signal operations are atomic operations (e.g., the test-and-set at the top of the loop of wait is done before losing the processor) o e.g., a resource such as a shared data structure is protected by a semaphore.

### Solutions to the Critical Section Problem

In chemistry, a solution is a special type of homogeneous mixture composed of two or more substances. In such a mixture, a solute is a substance dissolved in another substance, known as a solvent. The mixing process of a solution happens at a scale where the effects of chemical polarity are involved, resulting in interactions that are specific to solvation. The solution assumes the phase of the solvent when the solvent is the larger fraction of the mixture, as is commonly the case. The concentra

Peterson's algorithm (or Peterson's solution) is a concurrent programming algorithm for mutual exclusion that allows two or more processes to share a single-use resource without conflict, using only shared memory for communication. It was formulated by Gary L. Peterson in 1981. While Peterson's original formulation worked with only two processes, the algorithm can be generalized for more than two.

This section should be covered relatively rapidly to get quickly to the actual solution methods in the next sections. Equations (1)–(3) are just examples, not for solution, but the student will see that solutions of (1) and (2) can be found by calculus, and a solution y ex of (3) by inspection. Problem Set 1.1 will help the student with the ...
