x Sexual assaults continue to be pervasive in today's society. According to the World Health Organization, over a third of women experience partner or non-partner sexual violence over their lifetimes [1]. Over 284,000 Americans 12 years of age and older were sexually assaulted or raped in 2014 [2].

As shown in the XRD measurements presented in Fig. 1(a), the structure of the aged Cu/LTA catalysts is well maintained, even after hydrothermal aging at 900 °C for 8 h in the presence of 10% H<sub>2</sub>O and 21% O<sub>2</sub>. Fig. 1(b) presents the SEM image of pure H/LTA synthesized in this study. The crystal morphology of LTA was found to be uniform cubic with an average size of ~3 μm.

In sociology and statistics research, snowball sampling (or chain sampling, chain-referral sampling, referral sampling) is a nonprobability sampling technique where existing study subjects recruit future subjects from among their acquaintances. Thus the sample group is said to grow like a rolling snowball. As the sample builds up, enough data are gathered to be useful for research.
