Series And Parallel Circuits Lab

The calculated equivalent resistances for the series circuits will abide by the equation $R_{eq} = R_1 + R_2$ and for the parallel circuits the value will be similar to $1/R_{eq} = 1/R_1 + 1/R_2$. The current flow is expected to be uniform throughout the series circuits, but will be stronger through the smaller resistor in the parallel circuits.

In the third step, currents were calculated for series and parallel circuits. In the series circuit, it was discovered that the current flowing through both resistors was more-or-less equal to one another (0.086 A and 0.084 A), despite the huge difference between the resistance in each resistor (10 and 51 Ohms).
