### **Solution Of Boundary Value Problems**

In mathematics, in the field of differential equations, a boundary value problem is a differential equation together with a set of additional constraints, called the boundary conditions. A solution to a boundary value problem is a solution to the differential equation which also satisfies the boundary conditions. Boundary value problems arise in several branches of physics as any physical ...

In this final section of the Solving chapter we will solve inequalities that involve absolute value. As we will see the process for solving inequalities with a  $<$  (i.e. a less than) is very different from solving an inequality with a  $>$  (i.e. greater than).

In the field of differential equations, an initial value problem (also called a Cauchy problem by some authors [citation needed]) is an ordinary differential equation together with a specified value, called the initial condition, of the unknown function at a given point in the domain of the solution. In physics or other sciences, modeling a system frequently amounts to solving an initial value ...
