A while back, I conducted extensive research into Revit content management tools. I was commissioned by Unifi to do this, and I told the story of the process over here. You can also watch the related webinar here. Over the last couple of years, some of you have approached me to gain access to the master Excel comparison matrix document that I produced.

A few years back, I advanced on a Grasshopper plugin to generate SCIA Engineer structural analysis data. For a few different reasons, this stalled and didn't work as successfully as I would have liked. Late last year I started work again on the ability to convert Structural Analysis IFC files into SCIA, and now I've enabled the same code into a revived Grasshopper plugin.

The parameter linker works on two sets of data. 1. A list of element pairs: This list defines which elements are linked and share information.. 2. A list of parameter sets: These are lists of parameter pairs that define which parameters in a source element will transfer data to which parameters in the destination element. You can create as many named sets of parameter pairs as you want.
