LabBench Activity Plant Pigments and Photosynthesis. by Theresa Knapp Holtzclaw. Introduction. In photosynthesis, plant cells convert light energy into chemical energy that is stored in sugars and other organic compounds. Critical to the process is chlorophyll, the primary photosynthetic pigment in chloroplasts. This laboratory has two separate activities: I. Plant Pigment Chromatography, and II.

Part C - Animal life cycles In the life cycle of an organism, meiosis is paired with the process of fertilization. Understanding the life cycle of an organism is the key to understanding how sexual reproduction ensures the inheritance of traits from both parents and also introduces genetic variation.
