In chemistry, a solution's concentration is how much of a dissolvable substance, known as a solute, is mixed with another substance, called the solvent. The standard formula is $C = m/V$, where C is the concentration, m is the mass of the solute dissolved, and V is the total volume of the solution.

5 Easy Ways to Calculate the Concentration of a Solution

A solution consists of a solute and a solvent. The solute is the substance that is dissolved in the solvent. The amount of solute that can be dissolved in solvent is called its solubility. For example, in a saline solution, salt is the solute dissolved in water as the solvent.
