In computer science, the subset sum problem is an important decision problem in complexity theory and cryptography. There are several equivalent formulations of the problem. One of them is: given a set (or multiset) of integers, is there a non-empty subset whose sum is zero? For example, given the set  $\{-1, -1, -1, 1\}$ , the answer is yes because the subset  $\{-1, -1, 1\}$  sums to zero.

World leaders, CEOs, and academics have suggested that a revolution in artificial intelligence is upon us. Are they right, and what will advances in artificial intelligence mean for international competition and the balance of power? This article evaluates how developments in artificial intelligence (AI) — advanced, narrow applications in particular — are poised to influence military power ...

The knapsack problem or rucksack problem is a problem in combinatorial optimization: Given a set of items, each with a weight and a value, determine the number of each item to include in a collection so that the total weight is less than or equal to a given limit and the total value is as large as possible. It derives its name from the problem faced by someone who is constrained by a fixed-size ...

A couple of years ago, we told you about two companies that had developed what could be best described as Star Wars droid couriers. It seemed pretty niche at the time. Now we learn that there are more than a half-dozen startups offering delivery robot services, which seems to be part of a larger trend of retail automation involving artificial intelligence (AI) and robotics.

Pruned Full length. How fast can quantum computers solve boolean satisfiability? According to our current understanding of quantum mechanics, a quantum computer with roughly  $N^3$  qubits can solve an  $N^3$  input SAT instance in roughly  $N^2$  time. There is a particular quantum algorithm (Shor's) that solves SAT this quickly.

1.1. What is AI? Artificial intelligence (AI) is a branch of computer science that aims to create intelligent machines. The term artificial intelligence was coined by John McCarthy, who first organized a workshop in 1956 with the goal "to proceed on the basis of the conjecture that every aspect of learning or any other feature of intelligence can in principle be so precisely described that a ...
