Converts the kinetic energy of the wind into a kinetic energy of the shaft, which then turns gears, then the generator converts that KE into electrical energy. Other Renewable Resources Biomass - burning wood or peat, heat and methane from composting waste (garbage, animal waste), converting agricultural and forestry waste into ethanol.

**15.3 Energy Resources - sheffieldschools.org**

Nonrenewable energy resources include oil,natural gas,and coal. They exist in limited quantities. Renewable energy resources include hydroelectric, solar,geothermal,wind,biomass,and nuclear fusion. Energy resources can be conserved by reducing energy needs and by increasing the efficiency of energy use. They are resources that exist in limited quantities

**Section 15.3 Energy Resources - Parkway Schools**

Potential energyis energy that is stored as a result of position or shape. In other words, it is energy with the potential to do work. For example, potential energy is stored in the stretched strings of a

guitar. It is also stored in the leaves high on a tree. If the string is plucked or the leaves fall, the potential energy turns into kinetic energy.
