Symptoms of a Mini-Stroke: An Introduction A mini-stroke (also known as a transient ischemic attack or TIA) is a condition that results from a temporary lack of blood flow to a specific part of the brain. It differs from a stroke because of its duration. Mini-stroke symptoms typically last only a few minutes; in most cases, symptoms go away within 30 minutes, but can last for up to 24 hours.

Multilingualism is the use of more than one language, either by an individual speaker or by a community of speakers. It is believed that multilingual speakers outnumber monolingual speakers in the world's population. More than half of all Europeans claim to speak at least one language other than their mother tongue; but many read and write in one language.
