Related Questions More Answers Below. The physics behind shadows is that light rays travel in straight lines. If an object obstructs the rays from a source of light, and if the unobstructed rays fall on another surface we see a shadow of the obstructing object. The portion of the the surface which did not receive the light from the source is essentially its shadow.

ANSWERS TO PHYSICS CLASSROOM WORKSHEETS PDF

A LARGE nearby light source will cast a blurry-edged shadow. There is a wide zone on the ground where the object casting the shadow only managed to eclipse PART of the LARGE light source. This forms the body of the soft edge of the shadow. It's exactly like the umbra and penumbra of the Moon's shadow during an eclipse.

Shadow physics | Physics Forums

Answers. A shadow that is cast upon a surface indicates a particular shape of a mass. A mass structure irrespective of size can be shadowed using radiation..The shadow occurs as a result of a mass absorbing a light flux on its event horizon, Thus the surrounding flux would trace the shape of

the mass structure..Basically a radiation flux...
