The properties we refer to in this lesson are all macroscopic properties: those that can be observed in bulk matter. At the microscopic level, matter is of course characterized by its structure: the spatial arrangement of the individual atoms in a molecular unit or an extended solid.

Classification and properties of matter - Chem1

What is a physical change in matter? Molecules can move from one physical state to another (phase change) and not change their atomic structure. Oxygen (O_2) gas has the same chemical properties as liquid oxygen. The liquid state is colder and denser (less energy), but the molecules are the same.

For regions 1, 2, 3 and 5 the authors of IAPWS-IF97 have developed fundamental equations of very high accuracy. Regions 1, 2 and 5 are covered by fundamental equations for the Gibbs free energy $g(T,p)$, region 3 by a fundamental equation for the Helmholtz free energy $f(T,v)$. All thermodynamic properties can then be calculated from these fundamental equations by using the appropriate ...

In chemistry, a solution is a special type of homogeneous mixture composed of two or more substances. In such a mixture, a solute is a substance dissolved in another substance, known as a solvent. The mixing process of a solution happens at a scale where the effects of chemical polarity are involved, resulting in interactions that are specific to solvation.

Effect of Matrix. Figures 3.26, 3.29 and 3.30 indicate that matrix type and related mechanical properties, especially tensile strength and hardness, exert considerable influence on fatigue strength. However, the decrease in endurance ratio with increasing tensile strength in Figures 3.26 indicates that increasing the tensile strength of Ductile Iron does not provide a proportionate increase in ...
