FORCES . A force is any push or pull that causes an object to move, stop, or change speed or direction.; The greater the force, the greater the change in motion will be. The more massive an object, the less effect a given force will have on the object.; Unless acted on by a force, objects in motion tend to stay in motion and objects at rest remain at rest.

Science 4-5 - SolPass

When all the forces that act upon an object are balanced, then the object is said to be in a state of equilibrium. The forces are considered to be balanced if the rightward forces are balanced by the leftward forces and the upward forces are balanced by the downward forces. This however does not necessarily mean that all the forces are equal to each other.

NOTE: The following stories seem to describe two kinds of "electric human" phenomena. One involves conventional static electricity, and the other is something more mysterious. If you *DON'T* get constant shocks when touching either people or metal objects, yet electronic devices often fail in your presence, then your problem is not strictly electrical.
