Section 3 Human Population Growth

Human height or stature is the distance from the bottom of the feet to the top of the head in a human body, standing erect. It is measured using a stadiometer, usually in centimetres when using the metric system, or feet and inches when using the imperial system.. A particular genetic profile in men called Y haplotype I-M170 is correlated with height. . Ecological data shows that as the ...

Human height - Wikipedia

Human population planning is the practice of intentionally controlling the rate of growth of a human population. Historically, human population planning has been implemented with the goal of increasing the rate of human population growth.

Human population planning - Wikipedia

In the 20th century the world population increased from 1.5 billion to 6.1 billion. Now closing in on 8 billion, population growth is slowing. How has population growth varied across the world? How has population changed over our history? See global and country-level data.

World Population Growth - Our World in Data

Future Population Growth - Our World in Data

Our growing population In 1950, five years after the founding of the United Nations, world population was estimated at around 2.6 billion people. It reached 5 billion in 1987 and 6 billion in 1999.

Population | United Nations

The relationship between population growth and economic growth is controversial. This article draws on historical data to chart the links between population growth, growth in per capita output, and overall economic growth over the past 200 years. Low population growth in high-income countries is likely to create social and economic problems while high population growth in low-income countries ...
