Reynolds Number. The Reynolds number is the ratio of inertial forces to viscous forces and is a convenient parameter for predicting if a flow condition will be laminar or turbulent. It can be interpreted that when the viscous forces are dominant (slow flow, low Re) they are sufficient enough to keep all the fluid particles in line, then the flow is laminar.

VISCOUS FLOW The velocity field in the momentum equation can be separated into two parties, a 'homogeneous solution' which satisfies $\partial^2 u / \partial r^2 = 0$ (9.12) and a particular solution which satisfies $\mu \partial^2 u / \partial r^2 = \partial p / \partial x$ (9.13) The particular solution is any one solution to the equation 9.13. One solution which satisfies equation ...

If you use lidocaine oral solution (viscous) on a regular basis, use a missed dose as soon as you think about it. If it is close to the time for your next dose, skip the missed dose and go back to your normal time. Do not put on 2 doses at the same time or extra doses. Many times lidocaine oral solution (viscous) is used on an as needed basis.
