Discrete mathematics deals with objects that come in discrete bundles, e.g., 1 or 2 babies. In contrast, continuous mathematics deals with objects that vary continuously, e.g., 3.42 inches from a wall. Think of digital watches versus analog watches (ones where the second hand loops around continuously without stopping).

Discrete Structures: Sample Questions, Exam 1, Solu-tions 1. Prove by mathematical induction that  $3 \nmid (n^3 - n)$  for every positive integer  $n$ . Answer: Basis step  $n = 1$ :  $n^3 - n = 1^3 - 1 = 0$ , and so we must check that  $3 \nmid 0$ .

A set is an unordered collection of distinct objects. The objects in a set are called the elements, or members, of the set. A set is said to contain its elements. A set can be defined by simply listing its members inside curly braces. For example, the set  $\{2,4,17,23\}$  is the same as the set  $\{17,4,23,2\}$ .
