Both air pollution and soil pollution are associated with gas filling stations. While air pollution is created by volatile chemicals vaporizing during the gas filling process, soil pollution can be caused by underground pipes or tanks rusting or leaking -- slowly releasing contaminants into surrounding area.

### **Pollution from Gas Stations | Sciencing**

An accurate estimate of groundwater velocity can be calculated using Darcy's Law. Darcy's law is an equation that describes groundwater movement in aquifers based on three variables: horizontal hydraulic conductivity, horizontal hydraulic gradient and effective porosity.

The Hoek-Brown criterion was introduced in 1980 to provide input for the design of underground excavations in rock. The criterion now incorporates both intact rock and discontinuities, such as joints, characterized by the geological strength index (GSI), into a system designed to estimate the mechanical behaviour of typical rock masses encountered in tunnels, slopes and foundations.
