**Lab. Report 19 Skeletal Muscle Structure Flashcards | Quizlet**

Skeletal muscles are the organs of the muscular system. They are called skeletal muscles because most of them are attached to bones. A skeletal muscle is composed mainly of skeletal muscle tissue bound together and electrically insulated by connective tissue layers. Individual skeletal muscle cells, called muscle fibers due to their long skinny shape, are wrapped in areolar connective tissue.

Bio13A Lab Manual Lab #6 Skeletal Muscles 53 Introduction . Skeletal muscle is the most abundant tissue in the body of healthy adults, comprising anywhere from about 30 to 50% of total body mass. The amount of muscle mass varies due to age, sex, and physical activity. For example, adolescent males have a dramatic increase in the amount of muscle mass

Structure of a Skeletal Muscle. The hierarchy of connective tissues associated with a skeletal muscle provide a continuous connection between muscle cells and their action on a bone or other attachment. At the same time cells are effectively separated from one another and each is controlled by a separate nerve fiber.

These tissues include the skeletal muscle fibers, blood vessels, nerve fibers, and connective tissue. Each skeletal muscle has three layers of connective tissue (called "mysia") that enclose it and provide structure to the muscle as a whole, and also compartmentalize the muscle fibers within the muscle .

Page 5. Internal Structure of a Skeletal Muscle • Skeletal muscles are composed of connective tissue and contractile cells. • The connective tissues surrounding the entire muscle is the epimysium. Bundles of muscle cells are called fascicles. The connective tissues surrounding the fascicles is called perimysium. • Label this diagram: Page 6.
