AP ES-003 Geology — bozemanscience

The water cycle, also known as the hydrologic cycle or the hydrological cycle, describes the continuous movement of water on, above and below the surface of the Earth. The mass of water on Earth remains fairly constant over time but the partitioning of the water into the major reservoirs of ice, fresh water, saline water and atmospheric water is variable depending on a wide range of climatic ...

Water cycle - Wikipedia

Cycling Phosphorus Phosphorus (P) is another one of the essential elements that cycle through the ecosystem. It is an element that is found in the ground and then taken up by plants and animals. Phosphorus starts its existence as phosphate ions (PO₄) in the rocks of the world. When it rains, the phosphates and other minerals are removed from the rocks and distributed in soils and the water all ...
