Sys. Safety 51(1), 53-100.

Verification, validation, and predictive capability in ...

In most high count rate situation both deadtime as well as pile-up problems are possible. As Evans pointed out that every detection instrument used for counting exhibits a characteristic time constant resembling the recovery time. He noted that after recording one pulse, the counter is unresponsive for successive pulses until a time interval equal to or greater than its deadtime, τ , has elapsed.

Radiation detector deadtime and pile up: A review of the ...

Introduction. Rather than providing a dry collection of equations, this article will focus on the experimental uncertainty analysis of an undergraduate physics lab experiment in which a pendulum is used to estimate the value of the local gravitational acceleration constant g . The relevant equation for an idealized simple pendulum is, approximately, $\omega = \sqrt{g/L}$ (1)

Figure 2. (A) The septum primum grows from the roof of the atria. (B) Fenestrations develop within the septum primum. (C) The septum secundum develops by an infolding of the atrial walls. The ostium secundum acts as a conduit for right-to-left shunting of oxygenated blood. (D) At the anterior superior edge of the fossa ovalis, the primum and secundum septa remain unfused, which constitutes a PFO.
