Root hairs are extensions of the epidermal cells on the surface of the root, and are continually being sloughed off by the soil and regrown. The tiny root hairs, which have a huge total absorptive surface area, have evolved in order to allow the plant to take in as much water from the soil as possible.

SparkNotes: Plant Structures: Roots

When the plant embryo emerges from the seed, the radicle of the embryo forms the root system. The tip of the root is protected by the root cap, a structure exclusive to roots and unlike any other plant structure. The root cap is continuously replaced because it gets damaged easily as the root pushes through soil.
