There are many features of the Vedic system which contrast significantly with conventional mathematics. Coherence - Perhaps the most striking feature of the Vedic system is its coherence. Instead of a hotchpotch of unrelated techniques the whole system is beautifully interrelated and unified: the general multiplication method, for example, is easily reversed to allow one-line divisions and the ...

Optimal control theory deals with the problem of finding a control law for a given system such that a certain optimality criterion is achieved.. It is an extension of the calculus of variations, and is a mathematical optimization method for deriving control policies. The method is largely due to the work of Lev Pontryagin and Richard Bellman in the 1950s, after contributions to calculus of ...

Remarkably, the first 6 terms (!) of the power series for this formula (with respect to  $e^2$ ) coincide with the corresponding terms in the exact expansion given above. It's only with the coefficient of  $e^{12}$  that things start to differ slightly: The correct coefficient of  $e^{12}$  is  $-4851/2^{20}$  whereas Ramanujan's formula gives  $-9703/2^{21}$ , for a discrepancy approximately equal to  $-e^{12}/2^{21}$ .
