Strength of Materials focuses on the strength of materials and structural components subjected to different types of force and thermal loadings, the limiting strength criteria of structures, and the theory of strength of structures. Consideration is given to actual operating conditions, problems of crack resistance and theories of failure, the theory of oscillations of real mechanical systems, and calculations of the stress-strain state of structural components.

Stephen P. Timoshenko wrote the seminal strength of materials textbooks used in 1920 through the 1980's and probably well beyond. For the most part, these books used the classic approach (as opposed to ones using matrix algebra) and were used in most higher-level undergraduate and graduate courses in the strength of materials.
