In linear algebra, an n -by- n square matrix A is called invertible (also nonsingular or nondegenerate) if there exists an n -by- n square matrix B such that $AB = BA = I_n$ where I_n denotes the n -by- n identity matrix and the multiplication used is ordinary matrix multiplication. If this is the case, then the matrix B is uniquely determined by A and is called the inverse of A , denoted by A^{-1} .
