Solving Exponential And Logarithmic Functions

In this section we will discuss a couple of methods for solving equations that contain logarithms. Also, as we'll see, with one of the methods we will need to be careful of the results of the method as it is always possible that the method gives values that are, in fact, not solutions to the equation.

Solving logarithmic equations usually requires using properties of logarithms. The reason you usually need to apply these properties is so that you will have a single logarithmic expression on one or both sides of the equation. Once you have used properties of logarithms to condense any log expressions in the equation, you can solve the problem by changing the logarithmic equation into an ...

1 Right Triangle Trigonometry Trigonometry is the study of the relations between the sides and angles of triangles. The word "trigonometry" is derived from the Greek words trigono ($\tau \rho' (\gamma \omega \nu \sigma)$), meaning "triangle", and metro ($\mu \phi \tau \rho \omega'$), meaning "measure". Though the ancient Greeks, such as Hipparchus

1. To solve a logarithmic equation, rewrite the equation in exponential form and solve for the variable. Example 1: Solve for x in the equation Ln(x)=8. Solution: Step 1: Let both sides be exponents of the base e. The equation Ln(x)=8 can be rewritten . Step 2: By now you should know that when the base of the exponent and the base of the logarithm are the same, the left side can be written x.
