Low-pass filters are by far the most common filter type, earning wide popularity in removing alias signals and for other aspects of data acquisition and signal conversion. For a low-pass filter, the pass-band extends from DC (0 Hz) to f c and the stop-band lies above f c.. In a high-pass filter, the pass-band lies above f c, while the stop-band resides below that point.

Uninstall. The GraphicsMagick package incorporates its own uninstall functionality. Always remove an installed GraphicsMagick via its uninstall function since manually removing it (such as by removing its installation directory) will leave behind the registry entries and path settings established at install time.
