Box and Cox (1964) developed the transformation. Estimation of any Box-Cox parameters is by maximum likelihood. Box and Cox (1964) offered an example in which the data had the form of survival times but the underlying biological structure was of hazard rates, and the transformation identified this.

In probability theory and related fields, a stochastic or random process is a mathematical object usually defined as a family of random variables.Historically, the random variables were associated with or indexed by a set of numbers, usually viewed as points in time, giving the interpretation of a stochastic process representing numerical values of some system randomly changing over time, such ...

In probability theory, Dirichlet processes (after Peter Gustav Lejeune Dirichlet) are a family of stochastic processes whose realizations are probability distributions.In other words, a Dirichlet process is a probability distribution whose range is itself a set of probability distributions. It is often used in Bayesian inference to describe the prior knowledge about the distribution of random ...

Introduction. A random event is any event which has a chance of happening. Probability is the measure of that chance. Random variables are functions which receive a random event and return a real number. Random variables may be discrete or continuous; discrete random variables are ones with a countable number of possible outcomes; continuous random variables are ones which have an infinite ...

Why pairwise likelihood? Xudong Huang and I are working on fitting mixed models using pairwise composite likelihood. JNK Rao and various co-workers have done this in the past, but only for the setting where the structure (clusters, etc) in the sampling is the same as in the model.

Multinomial Application: Gives probability of exactly n_i outcomes of event i, for i = 1, 2, ..., k in n independent trials when the probability p_i of event i in a single trial is a constant. Used frequently in quality control and other industrial problems. Example: Four companies are bidding for each of three contracts, with specified success probabilities. What is the probability that a ...
