Relation Function Domain And Range

In mathematics, the domain of definition (or simply the domain) of a function is the set of "input" or argument values for which the function is defined. That is, the function provides an "output" or value for each member of the domain. Conversely, the set of values the function takes on as output is termed the image of the function, which is sometimes also referred to as the range of the ...

Figure 8-4 shows an example DFT with N = 128. The time domain signal is contained in the array: x[0] to x[127].The frequency domain signals are contained in the two arrays: ReX[0] to ReX[64], and ImX[0] to ImX[64].Notice that 128 points in the time domain corresponds to 65 points in each of the frequency domain signals, with the frequency indexes running from 0 to 64.
